installation and user guide.

Contents. Welcome Installing receipt roll......7 Getting connected...... 9 Using cellular connection (SIM) 1. Access point Name (APN) set up 2. Selecting the cellular network Using WiFi Login on 14 Processing transactions...... 15 Chip and PIN sale **Contactless** sale

Welcome.

Thank you for choosing your A920 Pro terminal, designed to process transactions as quickly as possible utilising a WiFi or cellular connection. This user guide is designed to provide users of the A920 Pro with everything needed to set-up, register and process transactions.

Features:

- Touch screen for an exceptional user experience PIN on Glass no physical pin pad.
- Designed for both indoor and outdoor uses.
- Providing full spectrum wireless connectivity (4G, Bluetooth and WiFi).
- PCI DSS compliant for safe and secure card payments.
- Wide variety of options Chip and PIN, Apple Pay, Android Pay, swipe and contactless payments.
- Serve more customers, faster with faster printing than all other takepayments card machines.
- Ergonomic to hold, light and simple to use with an all new friendly user interface.
- Online reporting system as standard log in to view your transaction data or schedule email reports.

- Ability to breakdown transactions at employee level.
- Preconfigured for up to six employees.
- Plug and play we like to make it easy.

Should you have any queries on anything in this guide, please do not hesitate to contact us, our details are on the back cover of this guide.

Terminal overview.

Here is a quick overview of the A920 Pro terminal's external features.

Step 1.

Icon overview.

Below is a quick overview of the A920 Pro terminal's icon symbols.

Installing receipt roll.

Installing the receipt roll in the terminal is a simple process. Firstly, open the terminal's receipt compartment by carefully lifting the release catch.

Once open, place the receipt roll provided into the open compartment with the receipt paper extending from underneath the roll leaving at least 1cm exposed and close the cover.

The receipt roll is then loaded and ready for printing.

Are these correct? there's no new imagery for these?

Cellular

connection

A920 Pro Launcher.

When A920 Pro completes the start-up process the 'Launcher' will be displayed. The Launcher allows the user to configure items such as the Wi-Fi or cellular settings before loading the main application.

Getting connected.

The following steps are required to get your A920 Pro terminal connected and ready to use. The A920 Pro supports connections via WiFi and/or cellular (via a SIM). If you want to use your terminal with a cellular (mobile) connection, please refer to the below instructions. If not then please continue to page 13 "Using Wifi".

1. Access Point Name (APN) set up

The SIM requires the APN information in order to establish a connection with the cellular network and in turn provide the internet connectivity. If you have opted for a 4G ready A920 device, it should be preconfigured ready out of the box. If you need to configure your terminal for cellular connection, please follow these steps.

Using cellular connection (SIM)

The SIM setup process is made up of two main stages – the first the configuration of the Access Point Name(s) (APN) used by the SIM and the second optional step is to manually choose the cellular network the SIM should initially connect to.

1

Select the menu icon on the main A920 Pro Launcher screen and choose **APN Settings**. Next, tap the **+** symbol to add an APN setting.

Access Point Name (APN) set up (continued)

			⊲		

3

Once all details have been added. click the Back Button to return to the APN settings screen.

Make sure that the APN you have added has been selected and then press the back error to exit the APN settings.

2. If you wish to select the mobile network you want your A920 Pro to connect to, for example if you are in an area with poor mobile signals, please follow this step. Otherwise skip to the next step.

Using WiFi

Your A920 Pro supports connections to both 2.4Ghz and 5Ghz Wi-Fi networks and can be programmed with multiple network configurations for devices that are used in more than one location.

The A920 Pro will always treats WiFi as the primary connection type where present, with the cellular connection used as backup.

To configure the WiFi connection, follow these steps:

1

Select the menu icon on the main A920 Pro Launcher screen and choose **WiFi Settings**.
